NOTICE OF WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specific conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

This institution reserves the right to refuse to accept a copying order if, in its judgment, fulfillment of the order would involve violation of copyright law.

THE MAGAZINE OF NATURAL RESOURCE MANAGEMENT AND RESTORATION

Volume 59, Number 2 March/April 2015

ABOUT THE COVER

Pristine Fishhook Creek flows from the Sawtooth Mountains into Redfish Lake, a popular recreation area, high in the mountains of Central Idaho. This million acre public playground with 100+ alpine lakes and numerous streams and rugged peaks abounds with photo opportunities for outdoor enthusiasts to share and enjoy with future generations. Photo Credit: Bob Hanson, Gator Guard Environmental Products (This issue's reader submitted cover photo).

FEATURES

LANDFILL TECHNOLOGIES

8 **Landfill Turned into Solar-Powered Generation Facility**
A growing trend for renewable energy land use involves the installation of Photovoltaic (PV) solar arrays on closed landfills, undevelopable land, or potentially contaminated land. An engineered synthetic turf system was chosen to cap 35 acres at a Connecticut landfill; enabling the owner to turn their liability into an asset.
by Melissa Grace

EROSION CONTROL

14 **Damage Control from "FOD"**
The width of the runway at Camp Guernsey Army Airfield was falling well short of the aircrafts' wingspan, leaving exposed earth on either side to become high velocity projectiles, or Foreign Object Debris. Choosing the right products to control erosion while quickly establishing shoulder vegetation was essential to meet the many challenges in this project.
by Lee E. Johnson, CPESC & L A Sharkind, ASLA, RLA

STORMWATER MANAGEMENT

19 **Storms on the Promenade**
What was once a 14-acre wetland was filled to make way for a mall development, which included 12 acres of impervious roofs and parking lot. From the beginning, deep underlying wetland soils caused constant settlement under the parking lot and exterior utilities. Designers overcame a stormy sea of challenges to transform this declining mall into a dense mixed-use development mimicking native wetland conditions.
by James W. Tiggelaar, PE, CCS, LEED AP

SLOPE STABILIZATION

26 **Riverbank Restoration Success - From Brown to Green**
Due to a contaminated bank and sediment, a complex stabilization strategy was designed and implemented to act as a significant remedial element on this urban waterfront brownfield in downtown Portland, Oregon.
by Erik Bekkum, PE & Lio Ovelar, PE

MS4 COMPLIANCE

32 **Partnership Measures Behavior to Keep Watershed Clean**
The Keep It Clean Partnership has advanced watershed and stormwater education and outreach initiatives. Their experience and methods can provide some MS4s and watershed partnerships with a fresh perspective. Sustained synergy, pollution prevention, and clean water goals can be achieved by consistent and intentional implementation of Embraced Behavior evaluation strategies adopted by KICP.
by Jesse Poore, AICP, CFM

WATER QUALITY

37 **Removing Dissolved Phosphorus from Runoff & Drainage Waters**
The objective of this project was to design and construct a P removal structure to intercept dissolved P in runoff from a poultry farm in Eastern Oklahoma. This poultry farm was in close proximity to a stream and produced runoff with dissolved P concentrations that ranged from 1-2 ppm.
by Chad J. Penn

STREAMBANK STABILIZATION

42 **Environmentally Sensitive Streambank Stabilization Techniques (Geyserville Bridge and the Russian River - 5 Years Later)**
Redirective and bioengineering methods were critical on the Highway 128 Geyserville Bridge Project. The design concept was to redirect the stream thalweg with the best alignment possible, given the existing environmental constraints.
by John McCullah, CPESC

PONDS & LAKES

46 **Renovating a Tennessee Pond**
When a local landowner envisions a beautiful fishing pond out of what was once an old farm pond, the pond builder must navigate rocky soils to complete the renovation.
by Bob Lusk with Michael Gray
