Digital LARCOR Seismograph Field Data

Viewing the seismograph field data provided here requires downloading free analysis software from White Industrial Seismology, Inc. and the data files. The analysis program is technical, so we only recommend downloading this section of the study if you understand detailed blasting analysis.

If you chose view the field data, you must first download and install the software, download the data files (in .zip format) onto your hard drive, and restart your computer. When you open the analysis program point to the unzipped data file(s) on your hard drive and select the files you want to view. There is a complete help file with the analysis software.

For answers to questions about the *Comparative Study of Structure Response to Coal Mine Blasting* contact Ken Eltschlager, keltschl@osmre.gov.
